

MMSB is inviting Municipalities to express interest in participating in its Compost Bin Distribution Program. This program offers compost bins at a reduced cost for those looking to compost organic waste. These bins help keep organic waste out of landfills, whether used in private yards or shared community composting sites.

### **Benefits of Composting:**

- ✂️ **Reduces Landfill Waste:** Composting keeps organic waste like food scraps and yard trimmings out of landfills, helping to reduce the amount of waste that needs to be managed and minimizing landfill overflow.
- ✂️ **Improves Soil Health:** Compost enriches the soil by adding valuable nutrients, improving its structure, and increasing its ability to retain moisture. This leads to healthier plants and gardens.
- ✂️ **Cuts Greenhouse Gas Emissions:** Composting organic waste reduces methane emissions, which are released when organic materials decompose in landfills. This helps mitigate climate change by lowering overall greenhouse gas emissions.

If you are a resident or business in the area and would like to participate, please forward your name to the Town of Placentia by Friday, January 17th. We need to gather enough interest to proceed with the order, so don't miss out on this opportunity!

# Compost Bin Information

## Residential Option 1:

37-Gallon Compost Tumbler

Subsidized rate: \$45 per bin plus HST .

There is a minimum order of 40 bins.

## Residential Option 2:

50-Gallon Compost Tumbler

Subsidized rate: \$50 per bin plus HST.

There is a minimum order of 50 bins.
